

ABSTRACT OF THE DISCLOSURE

One embodiment of the present invention comprises a collapsible, manually-extracted paper-towel-roll storage and dispensing container. Paper towel rolls are manually loaded
5 horizontally in one or more vertical stacks inside the storage and dispensing container. A dispensing aperture is included at the bottom of the front face for manual removal of the paper-towel rolls from within the container. A viewing aperture is also contained on the front face of the container for viewing the contents of the storage and dispensing container. A removable door-mounting bracket attaches to the back side of the storage container and
10 dispenser for hanging the container from the top of a door. Either the top or bottom face of the container may be opened for loading and both faces may be opened for folding the container flat for efficient storage when not in use.
